PROFESSIONAL SUMMARY

Artificial Intelligence student at Horus University with hands-on experience building software systems independently across application development, databases, UI design, software testing, and cybersecurity. Experienced with Python, C++, Java, Flutter, Firebase, SQL, and practical QA workflows including test planning, manual testing, bug reporting, and validation. Built complete pharmacy and inventory/POS management systems, as well as AI and computer-vision projects, with a strong focus on reliability, usability, and secure data handling.

EDUCATION & TRAINING

Bachelor of Artificial Intelligence and Science — Horus University

Expected Graduation: 2029

Software Testing Track — Digital Egypt Pioneers Initiative (DEPI)

July 2026 – Present

- Specialized training in ISTQB fundamentals, software testing life cycle (STLC), test planning, bug reporting, manual QA, and practical testing methodologies.

TECHNICAL SKILLS

- **Programming:** Python, C++, Java, Dart, SQL, Bash
- **Frameworks & Tools:** Flutter, Git, GitHub, VS Code, CMake, Docker, Firebase
- **Databases & OS:** Firebase/Firestore, SQLite, MySQL, Linux (Kali, Fedora), Windows
- **Software Testing:** Manual Testing, Test Planning, STLC, Bug Reporting, Boundary & Input Validation
- **Cybersecurity:** Nmap, Wireshark, Burp Suite, Ettercap, Penetration Testing Fundamentals
- **AI & Computer Vision:** Python, YOLO, OpenCV, Image Processing, Machine Learning Fundamentals

KEY PROJECTS

Pharmacy Management System

Tech Stack: Java, C++, Python, Flutter, Firebase | Full Developer | Database | UI | Testing

- Developed the system independently from UI and database design through implementation and testing.
- Implemented medicine/product management, POS and invoicing, inventory and stocktaking, expiry-date tracking, search, reporting, and user roles/permissions.
- Performed manual testing and input/validation checks to improve reliability and data integrity.

Store & Inventory Management System

Tech Stack: Java, C++, Python, Flutter, Firebase | Full Developer | Database | UI | Testing

- Built an end-to-end store management and POS system for products, suppliers, purchasing, sales, and inventory operations.
- Implemented stocktaking, sales/purchase reports, barcode handling, low-stock alerts, and user roles/permissions.
- Designed database workflows and tested core operations, validation, and data consistency.

Full-Stack AI Web Chatbot

Tech Stack: Flutter, Google Cloud Firebase, Gemini API | Developer

- Developed a full-stack chatbot application integrating the Gemini API for dynamic user interaction and Firebase for persistent chat/data storage.

Subsurface Object Detection with GPR & YOLO

Tech Stack: Python, YOLO, OpenCV, Image Processing | Lead Developer

- Built a Ground Penetrating Radar (GPR) image-processing pipeline, prepared radar-image datasets, and applied a YOLO model for subsurface object detection.
